

MIINI PROJECT

PYTHON

WEBCAM

MOTION DETECTOR

Muskaan Shaikh

Aim :

Detect the moving objects with webcam and log their entry and exit time to/from the camera.

OpenCv

The Open Source
Computer Vision Library
has >2500 algorithms,
extensive documentation
and sample code for real-
time computer vision.

OpenCV supports a wide variety of programming languages like Python, C++, Java, etc. It can process images and videos to identify objects, faces, or even the handwriting of a human.

OpenCv use:

Computer vision is a field that deals with acquiring and processing images and make decisions based on the images.

pip install opencv-python

- cv2.VideoCapture()
- cv2.destroyAllWindows()
- cv2.cvtColor()
- cv2.imshow()

Other Libraries

Implementation:

Take 1st frame as base:

Using while loop take another frame

Create Delta image

Create Threshold image

Find Contours

Detect Motion and built green frame

Note time

Plot

Bokeh Library

Bokeh is a Python library for creating interactive visualizations for modern web browsers. It helps you build beautiful graphics, ranging from simple plots to complex dashboards with streaming datasets.

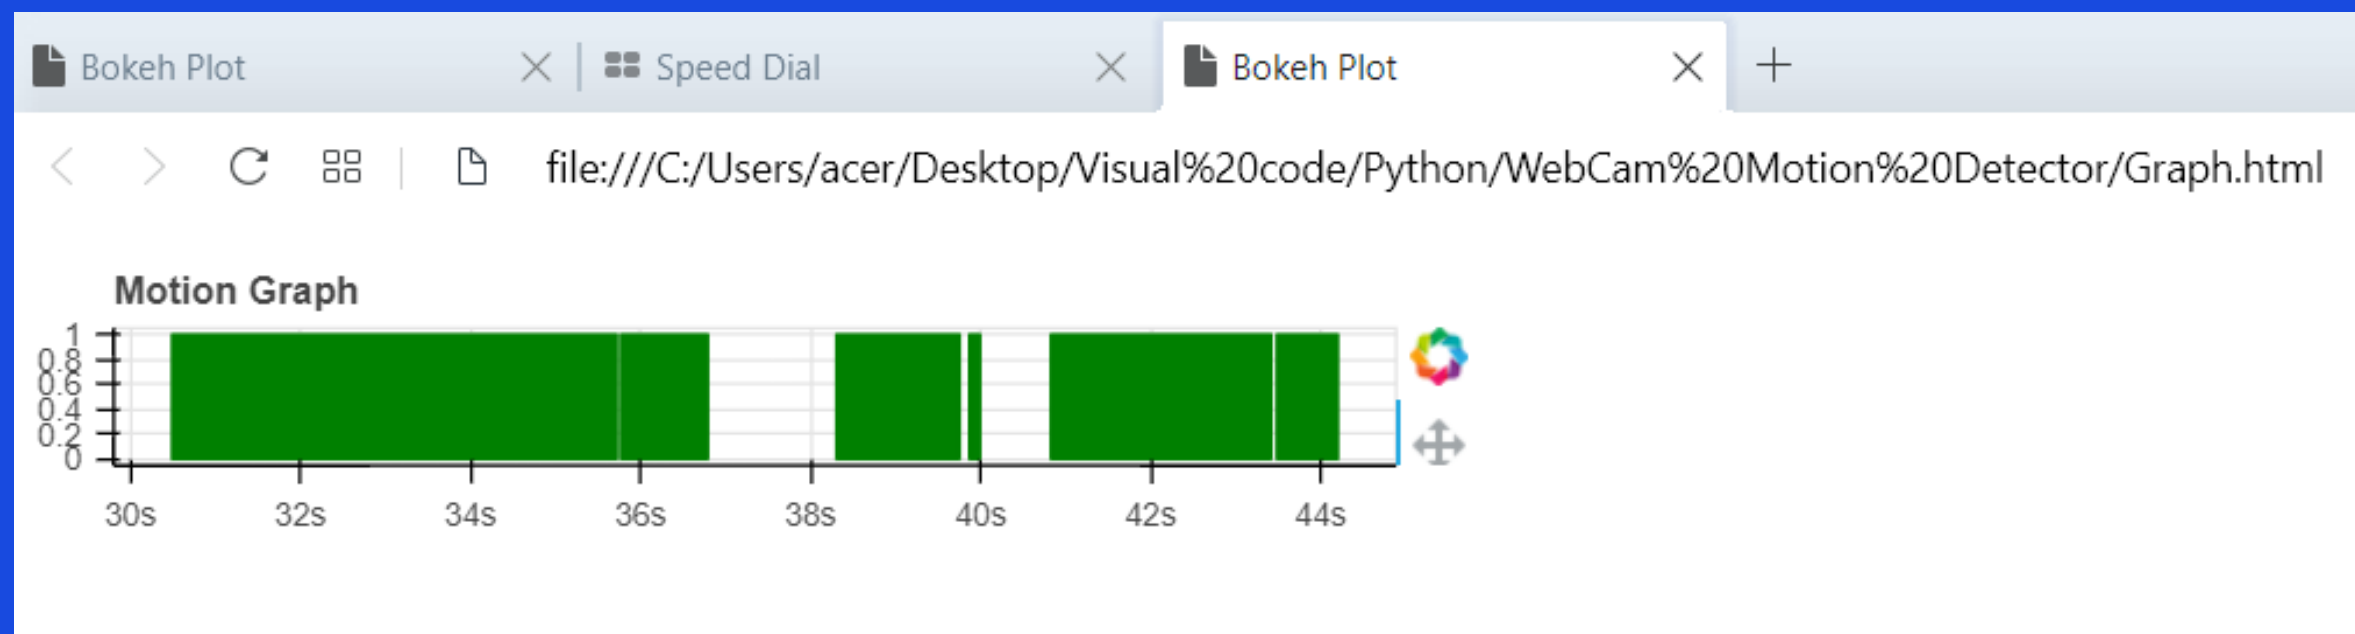

Output:

The original image

The Delta frame

The Threshold frame

The Bokeh Plot

Future Scope:

(1)

In Future to improve it we could embed it in a webapp ,deploy it on Heroku .

(2)

Rather using a webcam we can use a camera and deploy it on Raspberry Pi . It will make it simple and fast.

(3)

Also, we could do is to click the image of the object in motion.

**THANK
YOU**
